

Monthly Review

The fund was managed with a tactical attitude, as our market-timing models suggest probable performance discontinuities in major markets throughout the year. The structural equity exposure of the fund currently ranges from 10% to 20% of the NAV, and we should maintain that prudent stance in the short term. The reference market for our allocation (equity and fixed income) remains the US, but we like also to extract value from sector or geographical allocation.

Incidentally, we also invested in spreads like baskets vs indexes following opportunistic strategies. In light of our bearish expectation for 2020 we will try to implement some option strategies on single stocks or equity indexes toward the end of 2019.

On the currency side, we have reduced the US dollar exposure to around 1% of the NAV in the 1.0970-1.1030 area (down from former 6-8% NAV exposure) and we do not plan to increase it again in the short term.
